

ONE-YEAR GRADUATE DEGREE IN ECONOMICS

Academic Year 2018-2019

MEEG aims at training full-fledged economists and experts in the field of European regulation and policy. Technical and analytical competencies acquired through the program are intended to form professionals with a comprehensive understanding of the European regulatory framework, who are adept at managing relations between national institutions, companies, and European institutions.

Almost all big and medium-sized firms operating within EMU member states entertain stable and continuous interactions with key European institutions. These interactions can be severely hindered by insufficient knowledge of the evolution of European governance and regulatory framework on the side of firms. On the flipside, European institutions often fail to factor in technical and country-specific instruments, causing them to inadequately assess the impact of their regulatory framework on the private sector. **Our graduates will see the complete picture and act as a vital link between national institutions, companies, and European institutions.**

CORE COURSES

- Banking and Financial Regulation
- European Economic Integration
- European Policies and Policy Institutions
